### **DECISION MODELING CENTER**

# The benefit-harm balance of CRC screening of

### Aim:

To assess the benefit-harm balance of participating in CRC screening for finely stratified subgroups

# Preference weights of benefits and harms

Best-worst scaling survey:

- Most & least important outcome
- Odds of selecting that outcome as most important
- N=265 individuals aged 55-75 years

Risk of stress after positive FI Risk of false-positive FIT Risk of colonoscopy compliation Risk of false-negative test Lower risk of CRC death Lower risk of developing CRC

## **ASCCA** microsimulation model

# ASCCA microsimulation model

30, 20 and 10 year time horizon

Participants	Non-participants
Risk of false-positive FIT	_
Risk of colonoscopy	-
complications	
Risk of false-negative test	Risk of undetected CRC
Risk of CRC death	Risk of CRC death
Risk of developing CRC	Risk of developing CRC

1. Aleksandrova K, Pischon T, Jenab M, et al. Combined impact of healthy lifestyle factors on colorectal cancer: a large European cohort study. BMC Med. 2014

### **DECISION MODELING CENTER**

### 210 subgroups:

- Age: 55-75 years with 2years interval
- Sex
- History of CRC screening
- Lifestyle: 0-1, 2, 3, 4 or 5 healthy lifestyle factors (HLF)<sup>1</sup>

# **Benefit-harm analysis<sup>1</sup>**

Difference in risks for participants compared to non-participants

> Risks of benefits & harms of screening

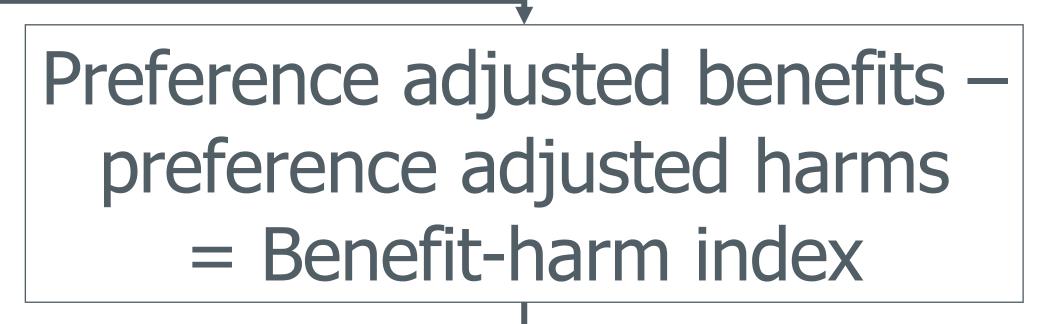

Preference weights

Preference adjusted benefits & harms of screening

1. Gail MH, Costantino JP, Bryant J, et al. Weighing the risks and benefits of tamoxifen treatment for preventing breast cancer. J Natl Cancer Inst. 1999

### **DECISION MODELING CENTER**

Repeated 100,000 times

Distribution of benefitharm indices

Screening beneficial: probability of positive indices >= 0.60

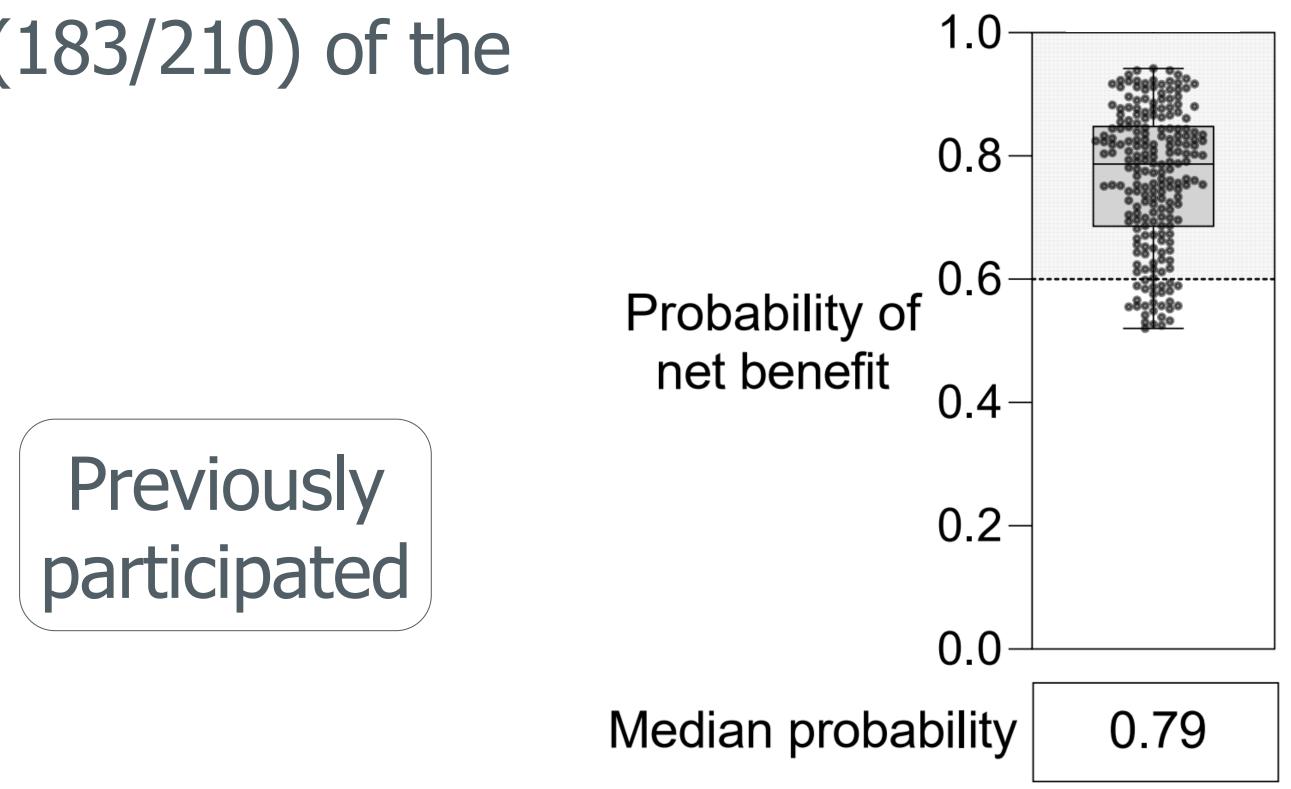

# Net health benefit: 87% (183/210) of the subgroups

No net health benefit:

# ≥ 70 years & Unhealthy (0-1 HLFs)

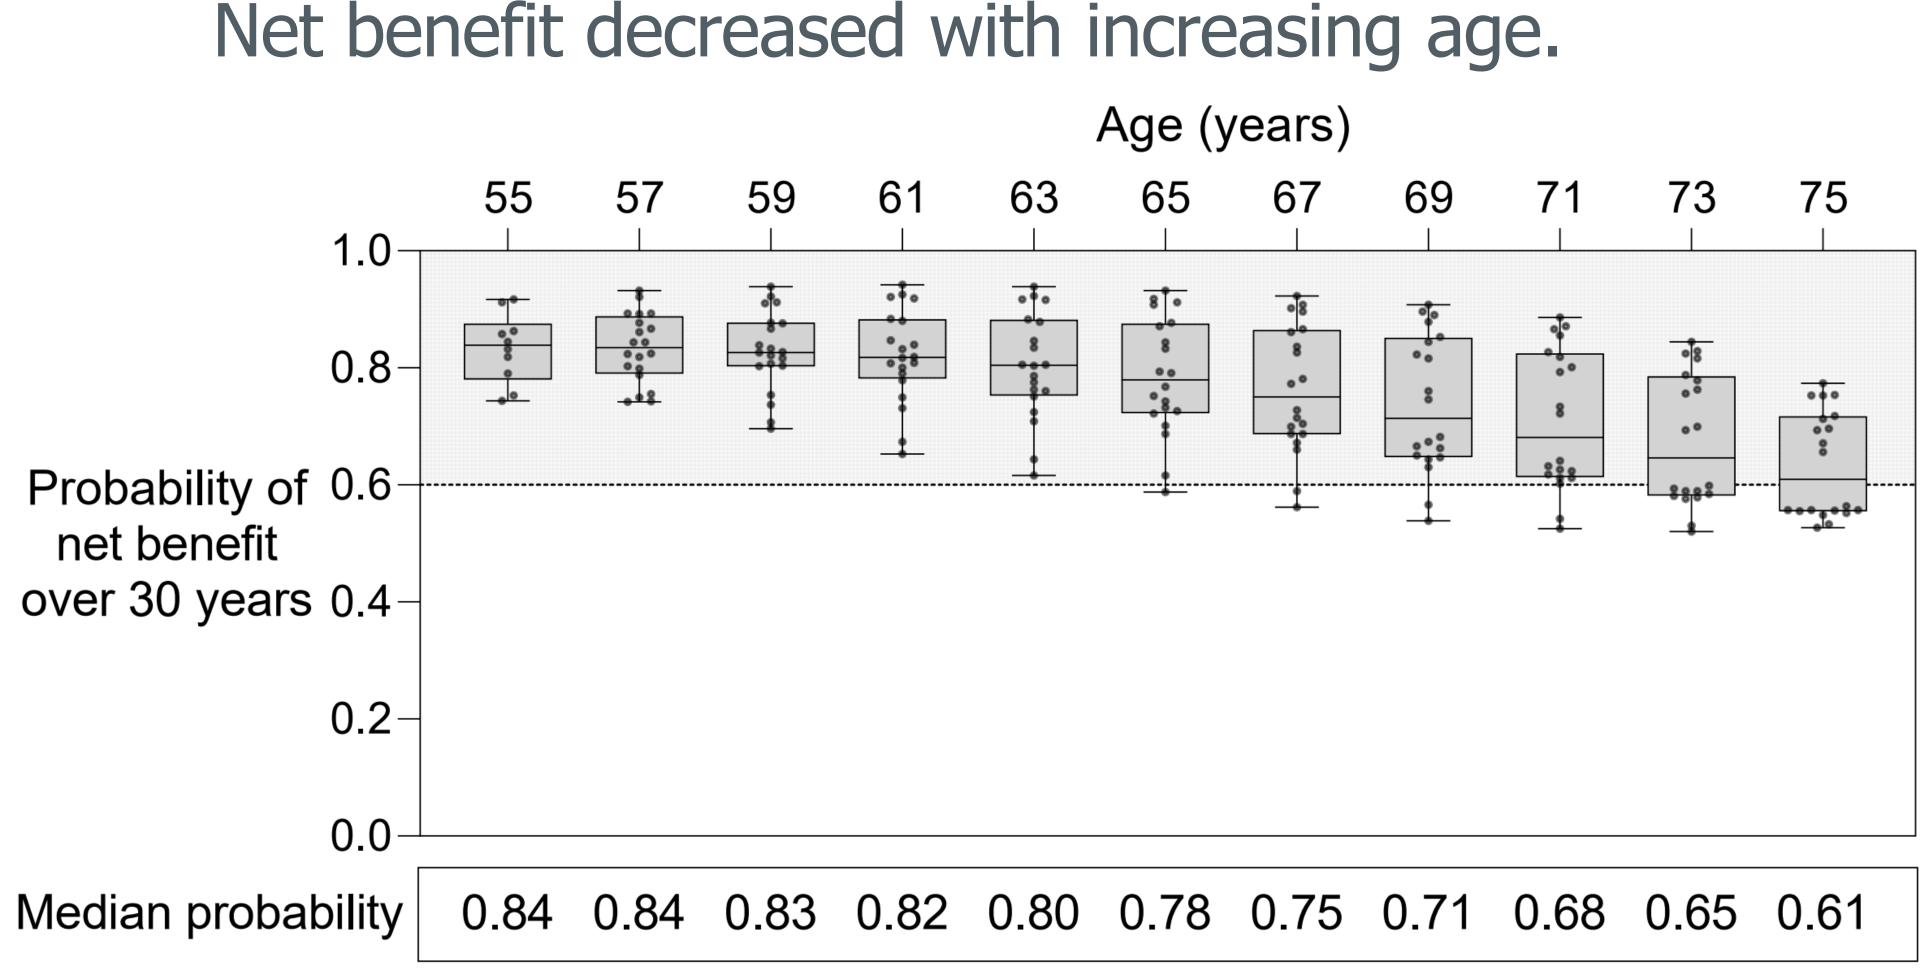

**DECISION MODELING CENTER** 

&

#### **DECISION MODELING CENTER**

Net benefit was lower for:

Those with 0-1 HLFs

Net benefit was greater for:

Men than women

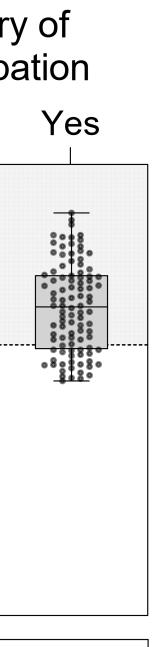

Probability of 0.6net benefit over 30 years 0.4-

 Those without history of participation

Median probability

**DECISION MODELING CENTER** 

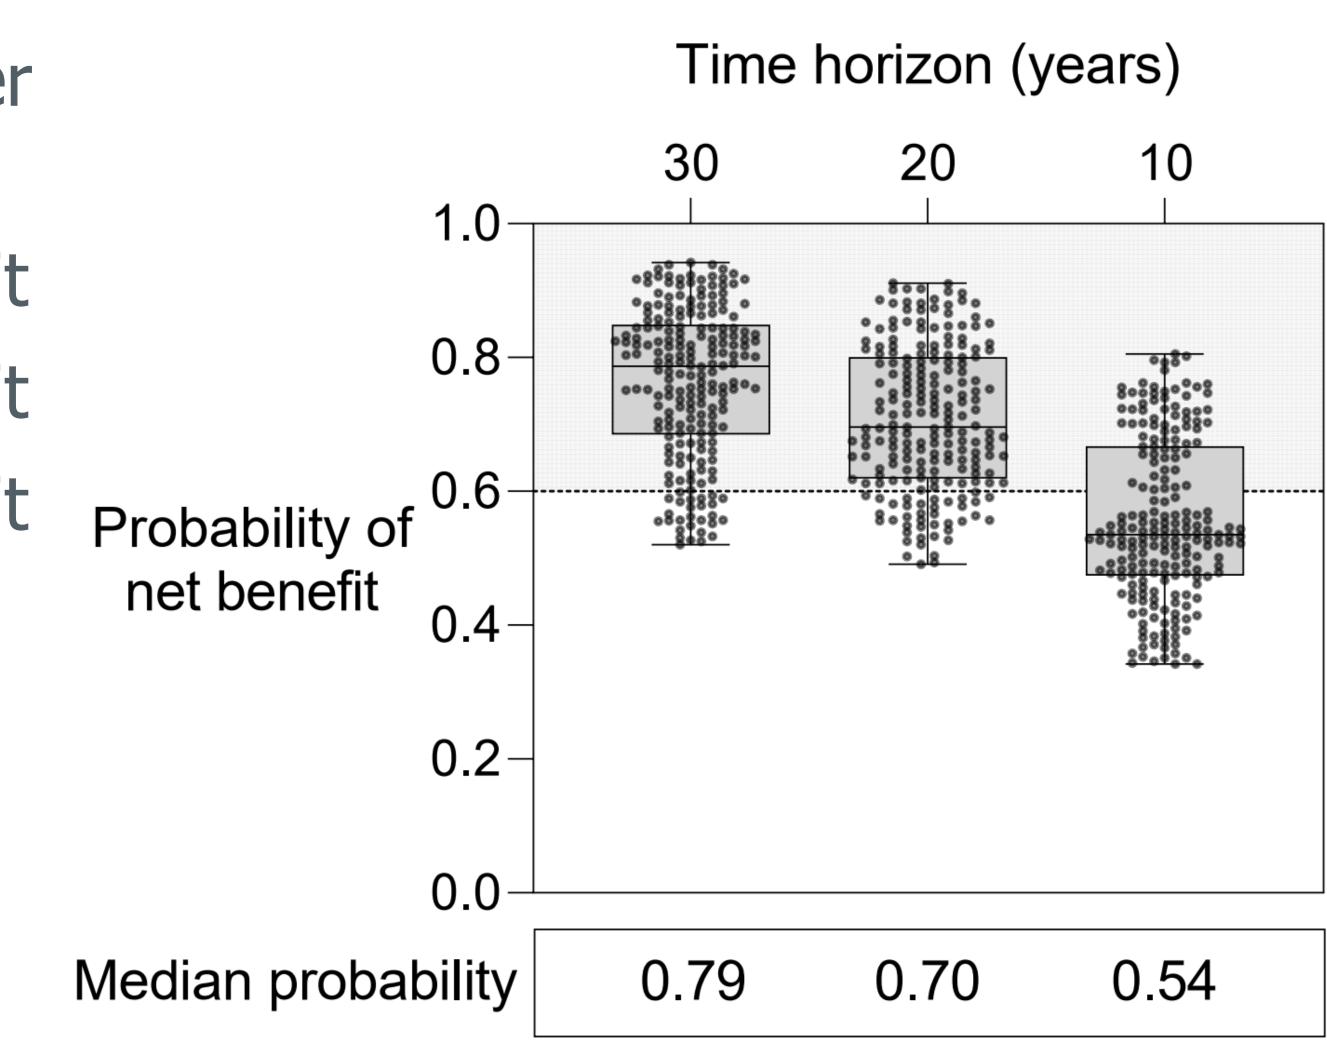

## Results

Net benefit decreased with shorter time horizons.

- 30-year: 87% net health benefit
- 20-year: 81% net health benefit
- 10-year: 34% net health benefit

# Conclusions CRC screening is beneficial for most subgroups over 30 years. Subgroups that did not achieve a net health benefit: $\left| \begin{array}{c} \geq 70 \\ \text{years} \end{array} \right|_{k} \left| \begin{array}{c} \text{Unhealthy} \\ \text{(0-1 HLFs)} \end{array} \right|_{k} \left| \begin{array}{c} \text{Previously} \\ \text{participated} \end{array} \right|$

The shorter the time horizon, the smaller the benefit from screening.

The results of this study can help individuals making informed decisions in participating in CRC screening
